

Donaldson Torit

TORIT® POWERCORE® DUST COLLECTORS
CP SERIES

SMALLER. SMARTER COLLECTORS.

Torit® Power Core® dust collection technology from Donaldson® Torit® outperforms traditional baghouse collectors and does so in less space. In one extremely small and powerful package, the Torit Power Core dustcollector handles high airflow, high grain loading, challenging particulate and fits into the smallest places.
The filter changeout is remarkably quick, easy and clean compared to the process for traditional bag filters.

Innovative Torit Power Core dust collectors combine award-winning Power Core filter packs with a new proprietary compact pulse cleaning system. This proprietary combination delivers high filtration efficienciesnot usually found in baghouse filtration.

OUTPERFORMS TRADITIONALBAGHOUSE COLLECTORS

Todays streamlined and lean manufacturing facilities demand peak performance even within the smallest spaces. Torit Power Core space-saving dust collectors are available as stand-alone models that can be ductedto many different applications, as well as bin vent models used on applications like silos, conveyor transfer points, conveyor discharges, blenders and mixers.

A- SMALLER
- **Bin vents fit into the tightest spaces**

B- CLEANER
- **Power Core filter packs with Ultra-Web® technologyprovide higher efficiency for cleaner air. Plus, replacing Power Core filter packs is a remarkably clean process**

C- EASIER
- **Clean-side filter access and fewer, lighter filters means faster, easier filter changes withouttools or filter cages**

D- SMARTER
- **An optimized airflow management system delivers optimal pulse cleaning while minimizingairflow restriction**

E- COST EFFECTIVE
- **Innovative Power Core filtration technology means reduced freight and installation costs, fewer filter changeouts, lower maintenance costs, and no entryrequirements for filter changes**
